Letter of Recommendation

To

The SRIP Selection Committee

BITS Pilani

Subject: Recommendation for Mr. Krishna Gaur – SRIP 2026

I recommend Mr. Krishna Gaur for the Summer Research Internship Program (SRIP) 2026 at BITS Pilani. I have known him through academic interactions in Artificial Intelligence and Machine Learning, where he has consistently demonstrated strong analytical ability and technical depth.

Krishna has a good foundation in deep learning architectures and practical implementation frameworks. He secured second position at the IIT Ropar Pre-Summit Hackathon, where he developed a low-light object detection and enhancement pipeline integrating CNN-based encoder–decoder models with Transformer modules. He implemented the complete system using TensorFlow and evaluated performance using metrics such as PSNR, SSIM, and UNIQUE. His ability to design and evaluate vision models reflects research aptitude.

He is currently engaged in advanced low-level vision research through participation in the LoViF 2026 Challenge (CVPR 2026), exploring modern restoration approaches and perceptual evaluation techniques. He demonstrates curiosity, independence, and persistence—qualities for research-oriented projects.

I am confident that Krishna will contribute meaningfully to research in neural networks and computer vision under the SRIP program. I recommend him for this opportunity.

Sincerely,

Dr. Pratyush Pranav

Assistant Dean, School of AI

Bennett University
